Date: Tuesday, February 9, 2016

Time: 8:00 a.m. Eastern Time

Location: Waldorf Astoria, Conrad Room

About Catalyst Biosciences, Inc.

Catalyst is a clinical-stage biopharmaceutical company focused on creating and developing novel medicines to address serious medical conditions. To date, Catalyst has focused its product development efforts in the fields of hemostasis, including the treatment of hemophilia and surgical bleeding, and inflammation, including prevention of delayed graft function in renal transplants and the treatment of dry age-related macular degeneration (Dry AMD), a condition that can cause visual impairment or blindness for which there are no approved treatments. Catalyst's most advanced program is an improved next-generation coagulation Factor VIIa variant, CB 813d, which has successfully completed a Phase 1 clinical trial in severe hemophilia A and B patients. In addition to Catalyst's lead Factor VIIa program, Catalyst has two other next-generation coagulation factors, a Factor IX variant, CB 2679d/ISU 304, that is in advanced preclinical development, and a Factor Xa variant, that is in the advanced lead stage of development. Forward-Looking Statements

All statements, other than statement of historical facts, included in this press release regarding our strategy, future operations, and plans, including statements relating to the development of the Company's products, are forward-looking statements. Actual results or events could differ materially from expectations in the forward-looking statements due to various important factors, such as the risk that that trials and studies may be delayed and may not have satisfactory outcomes, potential adverse effects arising from the testing or use of Catalyst's products, and other risks described in the Company's Quarterly Report on Form 10-Q filed with the SEC on November 5, 2015. Catalyst does not assume any obligation to update any forward-looking statements, except as required by law.
