

## **Catalyst Biosciences – Company Policy**

### **Adherence to PhRMA Code on Interactions with Health Care Professionals**

**April 2021**

Catalyst Biosciences (Catalyst) is dedicated to developing essential medicines to transform the lives of patients with coagulation and complement system disorders. As we are focused on the development of therapeutics for these patients' unmet needs, Catalyst holds itself to the high standards of corporate and regulatory compliance.

Given our commitment to our compliance programs, Catalyst adheres to the Pharmaceutical Research and Manufacturers of America (PhRMA) Code on Interactions with Health Care Professionals-September 2019 (hereafter referred to as the Code). The Code provides guidance for ethical relationships with health care professionals as information is relayed to the medical community regarding Catalyst products and development efforts.

The Code ensures claims about products are accurate, properly substantiated by scientific evidence, and that interactions remain consistent with regulatory authority communication requirements. To learn more about the Code, and review a complete copy, click here:
